

NiMCO MODEL 40 & 60 MANUAL UNITS

The NiMCO Model 40 manual bottom-sealing unit and the Model 60 manual top-sealing unit are designed for customers who need automatic machine quality liquid tight seals but do not have the production volume to justify fully automatic equipment. Manufactured in the USA, these units feature compact machine design and low maintenance requirements. These sealing systems are perfect solutions for conducting carton construction and seal tests or for forming and sealing samples for limited market or product tests.

The NiMCO Model 40 Unit

Cartons are manually pre-folded and then automatically heated and pressure sealed. Indexing of the turret is hand-operated. Tooling is available for all standard gable-top carton sizes and special sizes upon request.

The NiMCO Model 60 Unit

After filling, carton tops are heated, folded and then automatically pressure sealed. Movement of the carton through the heating and sealing stations is hand-operated (or manual). Fillers for liquids or dry products are optional. Tooling is available for all standard gable-top carton sizes and special sizes upon request.
